draft-lonnfors-simple-prescaps-ext-01

Mikko Lönnfors

mikko.lonnfors@nokia.com

IETF#57, Vienna

Status

- Just a refresh to keep the document alive
  - Does not contain recent 'What is a tuple' design team findings
  - Is not updated to latest caller preferences drafts

- Decision in interim meeting not to include presence capabilities into RPIDS but to progress it independently

- Caller Preferences and Callee Capabilities have now been slit into two documents -> Should be easier to progress

Open items

- UA receiving capabilities enabled presence document should be able to send message to UA which matches those capabilities
  - -> Should this be supported?

- Some overlap in RPIDS and prescaps
  - -> Define XML syntax so that conflicting parameters are eliminated

Way forward

- Update according to 'tuple design team' and recent drafts

- Redefine XML schema

- WG item?
