

# Partial PIDF format-04

Jari Urpalainen  
IETF63 Paris

# Changes from 03

- PIDF-diff can contain the full PIDF content added with the “version” attribute information
- “version” attribute content is used to order PDIF updates: full or partial.
- Partial PIDF Schema imports the PIDF schema and defines a new document root element `<pidf-full>` which contains PIDF content added with the “version” number

# Changes continue

- `<pidf-diff>` contains then partial updates
- `<pidf-diff>` also has a “version” attribute
- the content of this “version” attribute is incremented by one regardless whether `<pidf-diff>` or `<pidf-full>` is transported

# Conclusion

- No open issues (at least not known) -> ready for WGLC
