

Target Dialog

Jonathan Rosenberg

Cisco Systems

Changes in -02

- More text on importance of crypto-identifiers in dialog identifiers
- Removed example of NOTIFY as a dialog forming request
 - Isn't used with Target-Dialog – was confusing
- Rewrote overview to be more general
- Added IANA registrations

List Comments

- Proposal to replace In-Reply-To with this
 - Think we concluded to merely discuss relationship with it – not replace it
- Proposal to extend Target-Dialog to cover authorization for call backs
 - Would require potentially accepting requests with Target-Dialog after original dialog is over
 - Proposal: reject this, beyond scope

Dialog Eliminated

- What happens if request with Target-Dialog shows up and referenced dialog does not exist?
 - Spec says authorization happens another way - not authorized through Target-Dialog
- Proposal was made to have request rejected with 481
 - I think this is inappropriate usage of 481
 - Is there a need to know difference between failure due to non-existence of dialog, and non-authorization for other reasons? (I think no)
 - Propose keeping current text
