

# Remote Call Control

Rohan Mahy

[rohan@ekabal.com](mailto:rohan@ekabal.com)

# What's New?

- Focus draft on narrow subset of problem:
  - remote answer (use REFER to send 200 OK)
  - remote reject (use REFER to send 486, 603, etc..)
  - remote make call (already supported)
  - remote hangup (already supported)
- (Remove remote hold, etc..)
- Use the Target-Dialog header to select context/session/dialog
- Clarify authorization rules: If Referror and the Referree use the same identity/credentials, authorize the REFER.

# Issues / Next Steps

- Draft edited by Cullen while on drugs (wine)
- Much copy-editing and consistency needed
- Examples and Normative sections need to reflect use of Target-Dialog header described in Overview
- Needs IANA registration for response param and option-tag
- This is obvious. The MBUS approach is harder and has not gone anywhere. Can we please just do this?
