

# draft-ietf-sip-saml-00

New SIP-SAML I-D: draft-ietf-sip-saml-00.txt  
was: draft-tschofenig-sip-saml-05.txt

- addressed feedback on the list (thanks Vijay Gurbani)
  - Enhanced the "Example SAML Assertions" section
  - Added additional references
  - Changed the order of the "Specification Scope" and the "Introduction" section
  - Moved Use-case Scenarios in Appendix

# draft-ietf-sip-saml-00

What needs to be done with a future version:

- **normative considerations** (as opposed to editorial)
  - is this spec a solution for meeting only the trait-based authz requirements?
    - draft-ietf-sipping-trait-authz-02
    - If so, then the implications are:
      - draft-ietf-sip-saml-xx only needs to meet those stated requirements and compose simply with emergent SIP Identity RFC, and,
      - doesn't need to meet reqs of various SAML-based I-Ds eg sip-payment, SIP CPC, SPIT
    - those various SAML-based I-Ds may need their own SAML profiles

# draft-ietf-sip-saml-00

What needs to be done with a future version(cont'd):

- Discussion about enabling SIP Proxies to add SAML assertions to the SIP header by value
  - if SAML assertions can be conveyed by-value, then it may be more straightforward to have a single "SIP SAML Profile" that addresses the multiple, somewhat intersecting, use cases in the other I-Ds (mentioned on prior slide)
