

Domain Certificates in SIP

Vijay K. Gurbani, Scott Lawrence, and Alan Jeffrey

draft-gurbani-sip-domain-certs-04

IETF-68, SIP WG

Status

- ♣ Series of design team calls to clarify requirements.
- ♣ Presented at PKIX WG yesterday.
 - General reaction: On the right track.
 - Use EKU OIDs for enunciating the purpose of the certificate.
 - Will get specific wording from PKIX list.
- ♣ Next version in Chicago will include:
 - Guidelines on multiple identities in the SAN, with emphasis on being more liberal about the number of identities and how they are interpreted.
 - Allowing multiple names instead of exactly two as the draft now states.
 - Guidelines on identities in SAN (recommended) and CN (backwards compatibility).
 - More specific language on certificate validation for implementors.
