

SIP Info Framework

draft-ietf-sip-info-events-03

Eric Burger

Hadriel Kaplan

Christer Holmberg

Changes on List

- Fix up all occurrences of “dialog mumble” with “dialog parameters”
- Table 1 has archaic references to 2543
- Clarify language for overlapping INFOs and the “nil” package
- Now for Open Issues

Get a 489, can all still be fine?

- Option 1: Tear down dialog
Something is hopelessly broken, give up
- Option 2: ignore it
 - We say INFO does not change dialog state, and a 489 tearing down dialog changes state
 - But, handling 489 differently for INFO makes INFO “special”
 - But what if I said “package X is OK” in an INVITE, but there is glare between you sending an INFO from package X and my dropping X in my ACK?

Response Messages

- All agree on INVITE, UPDATE, ACK, 101-299, 300-699
- Probably sensible to exclude 100 from Recv-Info processing calculation. Thoughts?
- What about PRACK/PRACK 2xx?
- What about REFER/REFER 2xx?
- Missing Recv-Info, empty Recv-Info, Recv-Info: nil
