<p>There seemed to be consensus that if a 'speechrecog' resource was 'both', it could only be in one of 'normal' or 'hotword' mode at a given time.</p> <p>Is this a technology / semantic limitation or a licensing limitation? The reason I ask is the rationale given on the list seemed to revolve around licensing.</p> <p>If it is a licensing issue, I would offer the specification should allow "dual-mode." If it is a technology issue, never mind :)</p>
